BALANCING MACHINES

Equilibratrici automatiche per frizioni

Automatic balancing machines for clutches

VUBS30/PR

Equilibratrice automatica per frizioni completa di pressa di rivettatura. Correzione dello squilibrio mediante aggiunta manuale di rivetti e pressatura eseguita in automatico.

Automatic balancing machine for clutches equipped with riveting press unit. The unbalance correction is obtained by manual adding of suitable weight rivets and automatic pressing operation.

2VUBK30/R/P

Equilibratrice automatica a tre stazioni. Correzione dello squilibrio mediante selezione e inserimento rivetti in automatico tramite robot; pressatura eseguita in automatico su stazione dedicata, lancio di controllo al 100%.

Automatic balancing machine with three stations. The unbalance correction is obtained by automatic selection and placing of rivets by a robot; pressing operation performed automatically on the specific correction, check spin on the 100% of clutches.

Automatic balancing machines for clutches

CEMB

VPUBK50/US/UO

Equilibratrice automatica con correzione dello squilibrio mediante foratura orizzontale e/o saldatura di piastrine posizionate in automatico tramite alimentatore lineare.

Automatic balancing machine with unbalance correction by horizontal drilling unit and/or by plates welding machine, automatic positioning of the plates obtained by a linear feeder.

VPUBK100/TO

Impianto automatico per frizioni di camion a 2 stazioni. Correzione mediante foratura e fresatura. Caricatore lineare, 2 assi paralleli. La macchina è equipaggiata di cabina insonorizzante provvista di adeguate finestre per consentire la visibilità della zona di lavoro da parte dell'operatore.

Automatic balancing system for truck clutches with two stations. The unbalance correction is obtained by milling and drilling. Linear loader, two parallel axes. The machine is equipped with soundproof cabin and suitable windows to allow the maximum visibility of the working area by the operator.
